Ivan I. Yakovkin

PhD student (2021 – 2025)

Education

Department of Theoretical Physics, Faculty of Physics, Taras Shevchenko National University of Kyiv, "Quantum computers, computing and information":

- Bachelor with honors (2019)
- Master with honors (2021)
- PhD student (since 2021)

Research Interests

Faculty of Physics, Taras Shevchenko National University of Kyiv

Liquid crystals, plasmonics, optics, computational physics:

- Orientational transitions in nematic liquid crystals
- Flexoelectric effect, photoorientation, easy axis gliding
- Q-tensor simulation of defects in liquid crystals
- Tuning plasmonic resonances with liquid crystals

Astronomical Observatory, Taras Shevchenko National University of Kyiv

Solar physics, optics, computational physics:

- Magnetic fields and other conditions in solar flares and sunspots
- Non-LTE simulation of polarized radiative transfer
- Inversion of Stokes parameters
- Custom software for automated spectrum processing and analysis
- Noise detection in spectra using machine learning

Achievements

- 2022 – Best poster award at the 7th International Symposium on Dielectric Materials and Applications ISyDMA'7
- 2023 – Scientific Excellence Award (Taras Shevchenko National University of Kyiv)
- 25 articles in refereed journals, participation in 26 international conferences

Scientific computing

Numeric simulations of IVPs, BVPs, integral equations, Monte Carlo, etc

- Languages: COMSOL, python, Maple, Wolfram Mathematica, Matlab, Fortran, C++, Delphi

Detection and removal of spectrum contamination using convolutional neural networks

- Languages: python [pytorch, numpy]
- Techniques: custom modules with explicit backward gradient propagation

CAS-assisted analytical derivations

- Languages: Maple, Mathematica, python [sympy]

Setting up environments

- Environments: Windows, linux [Manjaro, wsl2, RHEL]
- Remote development: ssh, RDP, remote python debugging

Selected products

- Virtual Photometer* – precise digitalization and preprocessing of spectral data captured on photoplates (Delphi)

- Profile Manipulator* – expedited processing, analysis, and visualization of spectral line profiles (Delphi)

*Actively used for spectrum processing at the Horizontal Solar Telescope of the Astronomical Observatory, Taras Shevchenko National University of Kyiv

Commercial experience

Machine learning in finance

- Implementation of variational autoencoder models for predicting interest rates
- Languages: python [pytorch, numpy, scipy, pandas, pandera, numexpr, plotly]

Software engineering in wholesale credit risk

- Implementation of foundational and credit loss models for CCAR stress testing and CECL provisioning
- Languages: python [numpy, scipy, pandas, pandera, numexpr, pytorch, pyarrow]
